## NeoColab\_REC\_CS23231\_DATA STRUCTURES

REC\_DS using C\_Week 2\_COD\_Question 4

Attempt : 1 Total Mark : 10 Marks Obtained : 10

Section 1: Coding

#### 1. Problem Statement

Ravi is developing a student registration system for a college. To efficiently store and manage the student IDs, he decides to implement a doubly linked list where each node represents a student's ID.

In this system, each student's ID is stored sequentially, and the system needs to display all registered student IDs in the order they were entered.

Implement a program that creates a doubly linked list, inserts student IDs, and displays them in the same order.

## **Input Format**

The first line contains an integer N the number of student IDs.

The second line contains N space-separated integers representing the student IDs.

### **Output Format**

The output should display the single line containing N space-separated integers representing the student IDs stored in the doubly linked list.

Refer to the sample output for formatting specifications.

```
Sample Test Case
```

```
Input: 5
   10 20 30 40 50
Output: 10 20 30 40 50
   Answer
   // You are using GCC
   #include<stdio.h>
   #include<stdlib.h>
   struct node{
     int data;
     struct node *prev;
      struct node *next;
   };
   void insert(struct node **head,struct node **tail,int d){
   struct node *temp=(struct node*)malloc(sizeof(struct node*));
     temp->data=d;
     temp->next=NULL;
     temp->prev=*tail;
     if(*tail!=NULL){
        (*tail)->next=temp;
     }*tail=temp;
     if(*head==NULL){
        *head=temp;
     }
   void print(struct node *head){
     struct node *ptr=head;
   while(ptr!=NULL){
        printf("%d ",ptr->data);
```

```
ptr=ptr->next;
}
int main(){
    struct node *head=NULL;
    struct node *tail=NULL;
    int n;
    scanf("%d",&n);
    for(int i=0;i<n;i++){
        int r;
        scanf("%d",&r);
        insert(&head,&tail,r);
    }print(head);
}
Status: Correct

Marks: 10/10</pre>
```
